Annual Water Quality Report for the period of January 1 to December 31, 2020

CONSUMER CONFIDENCE REPORT (CCR)

Dean Water Supply Corp.

14411 CR 1134 Tyler, TX 75709 P.O. Box 4695 Tyler, TX 75712 (903) 597-2817 Main (903) 597-1828 Fax

PWS ID #TX2120009

For more information regarding this report contact: Billy McMillan, Senior Operator for Dean WSC (903) 597-2817

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water.

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono (903) 597-2817.

2020 Consumer Confidence Report for Dean Water Supply Corporation

This is your water quality report for January 1 to December 31, 2020

DEAN Water Supply Corporation provides groundwater from the Carrizo-Wilcox Aquifer located in Tyler, Smith County, Texas.

Definitions & Abbreviations: The following table contains scientific terms and measures, some of which may require explanation.

Scientific Term or Measure Action Level The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. Avg Regulatory compliance with some MCLs are based on running annual average of monthly samples. Level 1 Assessment Assessment Level 2 Assessment A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system. A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions. Maximum The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
Action Level The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. Regulatory compliance with some MCLs are based on running annual average of monthly samples. Level 1 A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system. Level 2 A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions. Maximum The highest level of a contaminant that is allowed in drinking water. MCLs are set as

why total coliform bacteria have been found in our water system on multiple occasions. Maximum The highest level of a contaminant that is allowed in drinking water. MCLs are set as
Maximum The highest level of a contaminant that is allowed in drinking water. MCLs are set as
Contaminant close to the MCLGs as feasible using the best available treatment technology.
Level or MCL
Maximum Contaminant The level of a contaminant in drinking water below which there is no known or expected
Level Goal or MCLG risk to health. MCLGs allow for a margin of safety.
Maximum residual The highest level of a disinfectant allowed in drinking water. There is convincing
disinfectant level evidence that addition of a disinfectant is necessary for control of microbial
or MRDL contaminants.
Maximum residual The level of a drinking water disinfectant below which there is no known or expected risk
disinfectant level goal to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
MFL million fibers per liter (a measure of asbestos)
mrem millirems per year (a measure of radiation absorbed by the body)
na not applicable
NTU nephelometric turbidity units (a measure of turbidity)
PCi/L picocuries per liter (a measure of radioactivity)
pbb micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water
ppm milligrams per liter or parts per million - or one ounce in 7,350 gallons of water
ppq parts per quadrillion, or picograms per liter (pg/L)
ppt parts per trillion, or nanograms per liter (ng/L)
Treatment Technique A required process intended to reduce the level of a contaminant in drinking water
or TT

Information about your Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally
 occurring or result from urban storm water runoff, industrial or domestic
 wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).

Information about Source Water

TCEQ completed an assessment of your source water, and results indicate that some of our sources are susceptible to certain contaminants. The sampling requirements for your water system is based on this susceptibility and previous sample data. Any detections of these contaminants will be found in this Consumer Confidence Report. For more information on source water assessments and protection efforts at our system contact **BILLY McMILLAN** at **(903) 597-2817**.

DEAN WSC provides ground water in Tyler, Smith County, Texas from the Carrizo-Wilcox Aquifer.

Source Water Name	Type of Water	Report Status	Location	
Well #1 14355 CR 1134	groundwater	INACTIVE plugged in 2015	Carrizo-Wilcox Aquifer	
Well #2 15345 CR 1130	groundwater	SOLD in 2015	Carrizo-Wilcox Aquifer	
Well #3 12683 Candleridge Dr.	groundwater	Active	Carrizo-Wilcox Aquifer	
Well #4 12002 Joni Drive	groundwater	Active	Carrizo-Wilcox Aquifer	
Well #5 14435 CR 1134	groundwater	Active	Carrizo-Wilcox Aquifer	

Lead & Copper

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Lead & Copper	Date Sampled	MCLG	Action Level (AL)	90 th Percentile	# of Sites Over AL	Units	Violation	Likely source of Contamination
Copper	9/5/2019	1.3	1.3	0.346	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.

2020 Water Quality Test Results

Disinfectants and Disinfection By-Products	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination	
Haloacetic Acids (HAA5)	2020	2	2.1 – 2.1	No goal for the total	60	ppb	N	By-product of drinking water disinfection.	
*The value in the High	*The value in the Highest Level or Average Detected column is the highest average of all HAA5 sample results collected at a location over a year								
Total Trihalomethanes 2020 9 9.13 - 9.13 No goal for the total ppb N By-product of drinking water disinfection.									
*The value in the Highest Level or Average Detected column is the highest average of all TTHM sample results collected at a location over a year									

Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Barium	8/8/2019	0.057	0.049 - 0.057	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Fluoride	2020	0.102	0.102 – 0.102	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Nitrate [measured as Nitrogen]	2020	0.0443	0.0119 - 0.0443	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.

Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Combined Radium 226/228	10/17/2016	1.5	1.5 – 1.5	0	5	pCi/L	N	Erosion of natural deposits.

Disinfectant Residual	Year	Average Level	Range of Levels Detected	MRDL	MRDLG	Unit of Measure	Violation	Source in Drinking Water
Free Chlorine	2020	0.925	0.650 – 1.175	4	4	ppm	N	Water additive used to control microbes.
